Building an IoT Monitoring System > Introduction

Assignment :

Below is an assignment as part of the training. **This assignment is for self-study and won't be counted for evaluation. Hence, you need not submit the assignment.** You can, however, document your answer in your personal notebook and save it for your future reference. There will be no submission of this assignment.

I believe by now you have a basic idea about IoT. Before we move on to the technical details in the coming sections,I want you to work on your first assignment in of your training. Your assignment is as follows:

Login to the internet, research and list out 10 IoT products and the companies that make them. You can make use of Google for completing this assignment.
An example here is the 'NEST Thermostat' which has been built by NEST, which is a company owned by Google.
